-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This office action is in response to the amendment and remarks filed 5/10/04. Since the examiner has applied new grounds of rejection, this office action is being made non-final to afford the applicant the opportunity to respond to the new grounds of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 2, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by **Foss et al.** (U.S. 5,408,825).

***Fig. 2***

***Fig. 4***

With respect to claim 2, Foss teaches a nozzle for a gas turbine combustor comprising: a fuel oil supply pipe 14' passed through a cylinder unit 49 provided in an axial direction of the nozzle, the fuel oil supply pipe 14' having a rear end portion for supplying fuel therefrom; a plummer block PB for holding the fuel oil supply pipe 14', the plummer block PB allowing the fuel oil supply pipe 14' to expand and shrink in the axial direction as a result of thermal expansion or compression; a heat-shielding air layer 58 formed between the fuel oil supply pipe

14' and the cylinder unit 49; and a plurality of atomized-fluid supply paths (50 or 84) provided in a circumferential direction of the cylinder unit. See particularly **Figures 2, 4** of Foss.

With respect to claim 4, **Foss** teaches a nozzle for a gas turbine combustor comprising: a fuel oil supply pipe 14' passed through a cylinder unit 49 provided in an axial direction of the nozzle, a heat-shielding air layer 58 formed between the fuel oil supply pipe 14' and the cylinder unit 49 and a plurality of atomized-fluid supply paths 74 and fuel gas supply paths 50 disposed uniformly in a circumferential direction of the cylinder unit 49. See particularly **Figures 2, 4** of Foss.

With respect to claim 6, **Foss** teaches that the fuel oil supply pipe 14' has a rear end portion for supplying the fuel therefrom held not to restrict a displacement in axial direction due to thermal expansion or compression. See particularly **Figures 2, 4** of Foss.

Allowable Subject Matter

3. Claims 5 and 7 are allowed.

Claims 3 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The indicated allowability of claim 2 is withdrawn in view of the reference(s) to **Foss et al. (U.S. 5,408,825)**. See rejection above.

Response to Arguments

4. Applicant's arguments with respect to claim 2 have been considered but are moot in view of the new ground(s) of rejection.
